

PANNATHORN BRIKSHAVANA

Junior Software Engineer

+6661-568-2507 pannathorn.brik@gmail.com capstone.pobemas.com
pan4brik Bangkok, Thailand

ABOUT ME

Junior software engineer focused on Python and FastAPI back-end development, with working SQL and a Next.js / React front end. Returning to work after a five-year family-care break; spent the last two months re-skilling full-time and shipping a tested, CI-backed, cloud-deployed full-stack project. Comfortable with Git, REST API design, automated testing, and CI/CD.

EDUCATION

07/2026 - Present

Self-directed

Self-directed Software Engineering Re-skilling

SQL (July) → Python (July) → FastAPI & Next.js (August–present). Built and deployed the capstone project below.

06/2017 - 06/2021

Bangkok University

B.Sc. in Software Engineering

Information Technology and Innovation | Pathum Thani, Thailand | 3.92

EXPERIENCE

07/2021 - 06/2026

My Family

Full-time Family Carer

Primary carer for a family member; responsibility now resolved.

PROJECTS

08/2026 - Present

Developer

Capstone — Full-stack Notes Application

Deployed full-stack notes app — a FastAPI REST API with a Next.js (App Router) front end, pytest suite in CI, API and web deployed separately.

GitHub: github.com/pan4brik/capstone-api · github.com/pan4brik/capstone-web

Tasks

- Designed and built a REST API in FastAPI with several endpoints — health check, notes retrieval, and a third-party Frankfurter API (currency exchange rates) integration — using Pydantic models and environment-based configuration.
- Built a Next.js (App Router) front end that fetches and renders API data through server-side requests, with explicitly typed API responses to pass production type-checks.
- Added an LLM-backed Q&A endpoint (Google Gemini) that answers questions grounded in the notes corpus, protected by request-quota and rate-limit guards.
- Wrote a pytest suite for endpoint behaviour and core logic, run automatically on every push via GitHub Actions with pinned dependencies.
- Deployed the API to Render and the front end to Vercel (free tier); managed the API base URL and allowed CORS origin through environment variables so no code changes are needed between local and production.

SKILLS

• SQL • Git • Python • FastAPI • pytest • JavaScript • Next.js • REST API
